PROGRESS IN "CARING OF PEOPLE" FROM INVASIVE THERAPY TO FARMACOLOGICAL TREATMENT

G.L. Fanchiotti. G. Stanzani. \*I. Siggillino. \*\*D. Laufer.

We expose our own experience in this real images which 'tell us' about the dynamic of medical conception in Caring for People - oncologic patients.

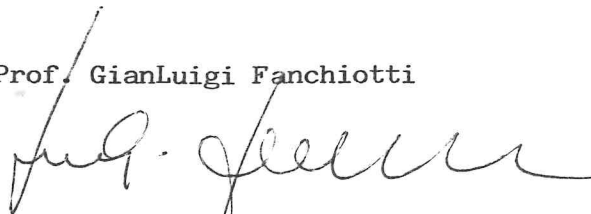

Our medical algorithm is the shift from invasive surgical therapy (cordotomy) - less invasive therapy (intrarachidian morphine) to a farmacological one (oral morphine).

This entails more quality of life for the patients and less medical legal problems for physicians.

We congratulate ASTA MEDICA for this opportunity that we have to express our own experience and own opinion.

Sincerely

Prof. GianLuigi Fanchiotti

\* Director of Urologic Department in Sacro Cuore of Negrar - Italy

\*\* Specialist in Oncology at Pain Department B.go Trento Hospital in Verona - Italy
